## Altitude control valve

### APPLICATION

Altitude control valve of this type controls the water level in, for example, water reservoirs without the need for using a float valve or other ancillary controls.

The highly sensitive pilot valve and the main valve are installed outside the water reservoir and the pilot valve senses the hydrostatic water pressure from the water level in the reservoir.

The main valve closes when the maximum set pressure for the pilot valve is reached and reopens when the water level corresponds to the lower set value on the pilot valve.

The standard version permits filling of a water storage unit. A special version is also available on request which can be used for both filling and emptying water storage units.

### APPROVALS

- DVGW
- WRAS (up to 23 °C)

### SPECIAL FEATURES

- High flow capacity
- Powder-coated inside and outside - Powder used is physiologically and toxicologically safe
- Integral control circuit and ball valves
- Integral fine filter
- No external energy required for operation
- Compact construction
- Light weight

### TECHNICAL DATA

<b>Media</b>	
Medium:	Drinking water
<b>Connections/Sizes</b>	
Connection size:	DN50 - DN450
<b>Pressure values</b>	
Max. operating pressure:	16 bar
Nominal pressure:	PN16
Minimum pressure:	0.7 bar

## CONSTRUCTION

Overview	Components	Materials	
	<b>1</b>	Housing with flanges acc. to ISO 7005-2 / EN 1092-2	Ductile iron (ISO 1083), powder-coated
	<b>2</b>	Two-way pilot valve	Brass
	<b>3</b>	Control circuit with integral rinsable filter insert and ball valves on inlet and outlet	High-quality synthetic material
	<b>Not depicted components</b>		
		Cover plate	Ductile iron (ISO 1083), powder-coated
		Diaphragm plate	Ductile iron (ISO 1083), powder-coated
		Diaphragm	EPDM
		Spring	Stainless steel
		Regulating cone	Stainless steel
		Valve seat	Stainless steel
		Compression fittings	Brass
		Pilot valve housing	Brass
		Filter insert	Stainless steel
	Seals	EPDM	

## METHOD OF OPERATION

At zero pressure the valve is closed. When the system is then put into operation, the water flows in and opens the diaphragm valve. This fills the reservoir until the water head corresponding to the set hydrostatic pressure on the pilot valve is reached and it then closes. If the pilot valve is closed, the pressure in the chamber above the membrane rises. The membrane surface area is larger than the valve surface area and therefore the diaphragm valve closes. If water is drawn from the water store, the hydrostatic pressure falls until it reaches the lower set pressure and the pilot valve then opens. In this way the pilot valve controls the opening and closing of the main valve.

## TRANSPORTATION AND STORAGE

Keep parts in their original packaging and unpack them shortly before use.

The following parameters apply during transportation and storage:

Parameter	Value
Environment:	clean, dry and dust free
Min. ambient temperature:	5 °C
Max. ambient temperature:	55 °C
Min. ambient relative humidity:	25 % *
Max. ambient relative humidity:	85 % *

\*non condensing

## INSTALLATION GUIDELINES

### Setup requirements

- Install shut-off valves
- Install downstream of the strainer
  - Protects against damage from coarse particles
  - Note flow direction (indicated by arrow)
- The installation location should be protected against frost and be easily accessible
  - Pressure gauge can be read off easily
  - Simplified maintenance and cleaning
- Provide a straight section of pipework of at least five times the nominal valve size after the pressure reducing valve (in accordance with EN 806-2)
- Safety valve SV300 optional
- Requires regular maintenance in accordance with EN 806-5
